PROFESSIONAL SUMMARY

Senior software engineer with 4+ years building and owning backend and full-stack systems in Python and C#. At Aziro I work directly with an enterprise client as sole engineer and raised a retrieval system's Top-1 accuracy from 41.9% to 97.7%. At Zenoti, restored degraded SQL queries on a multi-tenant SaaS product used by 30,000+ businesses. I build with Claude Code daily and am learning agents and RAG with LangChain and LangGraph.

TECHNICAL SKILLS

Languages: Python, SQL, C#, JavaScript

Backend & data: Django, DRF, REST APIs, System design, PostgreSQL, MySQL, SQL Server, Elasticsearch

AI & retrieval: Qdrant, CLIP (ViT-B/16), Reranking, Retrieval, Claude Code - learning LLMs, RAG and agents

Cloud & tooling: Google Cloud, Docker, CI/CD, GitHub Actions, Pytest, Git, React

WORK EXPERIENCE

Senior Software Engineer - Aziro (formerly MSys Technologies) Dec 2025 – Present

- Sole engineer on an enterprise client account, owning scoping, HLD/LLD, build, test, documentation and handover.
- Worked directly with client stakeholders, agreeing changes and integrating their system into the CAD app.
- Raised Top-1 accuracy of a two-stage visual retrieval system from 41.9% to 97.7% by growing the feature-based reranker from 3 to 8 features and tuning it against MRR, with CLIP ViT-B/16 embeddings in Qdrant handling recall.
- Delivered a config-driven Python desktop CAD validation platform end to end, with DXF parsing, 2D computational geometry, PySide6 and a JSON rule engine with full audit trails, automating 3+ manual workflows.

Co-Founder & Game Developer - UnKl Games Jun 2024 – Dec 2025

- Shipped Pen Fight 2D, a turn-based multiplayer game in Unity and C#, to 10K+ downloads and 500+ MAU.
- Built a serverless, server-authoritative economy on Unity Cloud Code and integrated Google Cloud auth and APIs.
- Architected real-time multiplayer and friend challenges on Unity Lobby and Relay, and built a master-follower physics simulation that handles race conditions on nearly every action.

Software Engineer - Zenoti Aug 2022 – May 2024

- Became primary code reviewer in just over a year, requesting changes on 25+ of 50+ PRs including work approved by senior staff, flagged 40+ changes that would have become defects and mentored teammates on defect resolution.
- Restored SQL queries degraded 2 to 3x to near-baseline response times with no downtime on a live system, and queried server logs in New Relic to trace bugs in test and production.
- Removed a data-loss risk by rewriting legacy stored procedures, one of them 4,000 lines, to use differential updates.
- Designed and owned a localization abstraction layer for a 500+ page C# and ASP.NET product in 5+ languages, with providers switchable by configuration, per-element opt-out and coverage through the API and database layers.
- Delivered 5 client-specific and 2 core features end to end, and 2 of them were adopted into the core product.

Software Engineer Intern - Zenoti Feb 2022 – Aug 2022

- Extended a hierarchical permission model as a 2-week proof of concept and shipped UI changes in a full redesign.

PROJECTS

HackerRank Orchestrate - Ranked 224 of 3,062 (top 8%) in a 24-hour AI agent hackathon, built with Claude Code.

CreatorHub - Designed modules and data models for a multi-tenant Django RBAC platform, built with Claude Code.

EDUCATION

MCA, Computer Applications - Vellore Institute of Technology (2020 – 2022) · GPA 8.74/10

B.Sc., Information Technology - St. Xavier's College, Ranchi (2017 – 2020) · GPA 8.26/10

CERTIFICATIONS

MCP: Advanced Topics (Anthropic), Claude Code in Action (Anthropic), Meta Back-End Developer (Meta)
