PROFESSIONAL SUMMARY

I have 4.5+ years of backend and full stack experience, 3.5+ of them in C#. My work covers cross-team collaboration on Zenoti's multi-tenant ASP.NET SaaS product used by 30,000+ businesses, ownership of a game from idea to 10K+ downloads, and problem solving that raised a Python retrieval system's Top-1 accuracy from 41.9% to 97.7%. Claude Code is part of my daily work, and with it I ranked top 5% of 4,094 in a 24-hour AI agent hackathon.

TECHNICAL SKILLS

Languages: C#, Python, SQL, JavaScript, TypeScript, XML
Backend: ASP.NET, .NET Core, .NET Framework, MVC, Entity Framework, REST APIs, Microservices, Django, DRF
Databases: MSSQL Server, Stored procedures, Query optimization, PostgreSQL, MySQL, NoSQL
Frontend: React, jQuery, HTML5, CSS3, SCSS
Retrieval & embeddings: Vector databases, Qdrant, CLIP (ViT-B/16), Reranking, PyTorch
Generative AI: LLMs, RAG, AI agents, LangChain, LangGraph, Orchestration, MCP, Prompt engineering, LLM evaluation
Engineering: System design, Design patterns, OOP, Data Structures and Algorithms, Code review, Unit testing, Agile, Scrum
Cloud & tooling: Google Cloud (GCP), Docker, CI/CD, GitHub Actions, Pytest, Git, Jira, Visual Studio, Claude Code

WORK EXPERIENCE

Senior Software Engineer - Aziro (formerly MSys Technologies) — Dec 2025 – Oct 2026

- Raised a Python visual retrieval system's **Top-1 accuracy from 41.9% to 97.7%** by growing its reranker from 3 to 8 features, tuned against MRR, with CLIP embeddings in Qdrant for recall. Re-keyed the Qdrant index, extracted the new features from images and set each weight through an evaluation harness.
- **Sole engineer on an enterprise client account**, owning requirements, HLD/LLD, build, test, documentation and handover.
- Delivered a config-driven **Python CAD processing platform** end to end, with DXF parsing, spatial indexing, PySide6 and an integration with the client's system. **Automated 3+ manual workflows** with a JSON rule engine running 10+ rules in priority order, with audit trails. Made batch processing **one click, with each file's full output set in under 30 seconds**.

Co-Founder & Developer - UnKl Games — Jun 2024 – Dec 2025

- Reached **10K+ downloads and peaks of 500+ DAU and 2,500+ MAU with no paid ads** by writing and shipping Pen Fight 2D, a turn-based game in C# and Unity.
- Owned the **full SDLC from ideation to production**, through internal testing, bug fixes, a closed beta and new features.
- Designed a **serverless, server-authoritative economy** on Unity Cloud Code with Google Cloud auth. Architected race-safe **online multiplayer** and friend challenges on Unity Lobby and Relay, with master-follower physics.

Software Engineer - Zenoti — Aug 2022 – May 2024

- Shipped **full-stack features in ASP.NET, C#, JavaScript, jQuery and SQL**, several with a product-wide footprint, and used server logs for debugging production issues.
- Removed **data-loss risk** by refactoring delete-and-reinsert saves into differential updates in **SQL Server stored procedures**, one 4,000 lines long.
- Caught **40+ would-be defects** before merge as the team's **primary code reviewer**, a role reached in just over a year, requesting changes on 25+ of 50+ PRs and mentoring teammates.
- Stopped **2 to 3x query performance regressions** in localization changes from reaching release, restoring queries to near baseline with an index and a setting to gate the stored procedures' longer path.
- Removed page-by-page localization integration by designing and owning a **plug-and-play integration layer**. **One call on a module's Master page localizes that module**, and the provider is initialized through one settings page.
- Made localization changes for **5+ languages**, which impacted the web app, REST APIs, databases, and mobile and iOS apps. Owned **product-wide date and time format localization**. Used async calls for provider responses on DOM load.

Software Engineer Intern - Zenoti — Feb 2022 – Aug 2022

- **Unlocked a major account** by extending a hierarchical permission model in C# and .NET as a 2-week proof of concept. Contributed production frontend changes across a full UI redesign in HTML, CSS, SCSS, jQuery and ASPX.

PROJECTS

HackerRank Orchestrate - Ranked 176 of 4,094 (top 5%). The task was an agent that proves whether a person's deleted data is truly gone and plans the fix, across 518 requests. A Python engine audits logs and database snapshots, Claude reads the requests, PDFs and screenshots, and a critic over every row caught 76 of 79 seeded faults. Built with Claude Code.

Portfolio - React and TypeScript site built with Claude Code. Three JSON files drive the site and the CV PDF, and GitHub Actions blocks content that doesn't hold together.

BGMI Tournament Management System - Django and PostgreSQL platform with leaderboards and a static JS front end.

LittleLemon API - Django REST Framework API covering models, serializers, endpoints, authentication and unit tests.

Handwritten Text Recognition - PyTorch character recognition trained on the IAM handwriting dataset.

EDUCATION

MCA, Computer Applications - Vellore Institute of Technology (2020 – 2022) · GPA 8.74/10
B.Sc., Information Technology - St. Xavier's College, Ranchi (2017 – 2020) · GPA 8.26/10

ACHIEVEMENTS AND CERTIFICATIONS

Competitive programming - HackerRank 5-star in Python and SQL, CodeChef peak rating 1692 across 19 contests.
MCP: Advanced Topics (Anthropic), Claude Code in Action (Anthropic), Meta Back-End Developer (Meta)
