PROFESSIONAL SUMMARY

Software engineer with 4+ years building and owning backend and full-stack systems in Python and C#. At Aziro I worked directly with an enterprise client as sole engineer and raised a retrieval system's Top-1 accuracy from 41.9% to 97.7%. At Zenoti, on a 500+ page multi-tenant SaaS product used by 30,000+ businesses, I worked on UI revamp, added an integration layer to localization and restored degraded SQL queries. I build with Claude Code daily and am learning agents and RAG with LangChain and LangGraph.

TECHNICAL SKILLS

Languages: Python, SQL, C#, JavaScript

Backend & data: Django, DRF, REST APIs, System design, PostgreSQL, MySQL, SQL Server, Elasticsearch

AI & retrieval: Qdrant, CLIP (ViT-B/16), Reranking, Retrieval, Claude Code - learning LLMs, RAG and agents

Cloud & tooling: Google Cloud, Docker, CI/CD, GitHub Actions, Pytest, Git, React

WORK EXPERIENCE

Senior Software Engineer - Aziro (formerly MSys Technologies) Dec 2025 – Oct 2026

- Sole engineer on an enterprise client account, owning scoping, HLD/LLD, build, client-system integration, test, documentation and handover.
- Raised Top-1 accuracy of a two-stage visual retrieval system from 41.9% to 97.7% by growing the feature-based reranker from 3 to 8 features and tuning it against MRR, with CLIP ViT-B/16 embeddings in Qdrant handling recall.
- Automated 3+ manual workflows by delivering a config-driven Python desktop CAD validation platform end to end, with DXF parsing, 2D computational geometry, PySide6 and a JSON rule engine with full audit trails.
- Replaced manual CAD-variation work with rule-based geometry augmentation that heals the 2D geometry.

Co-Founder & Game Developer - UnKl Games Jun 2024 – Dec 2025

- Reached 10K+ downloads and 500+ MAU with no paid ads by shipping Pen Fight 2D, a turn-based Unity game.
- Built a serverless, server-authoritative economy on Unity Cloud Code and integrated Google Cloud auth and APIs.
- Architected online multiplayer and friend challenges on Unity Lobby and Relay, and built a master-follower physics simulation that handles race conditions on nearly every action.

Software Engineer - Zenoti Aug 2022 – May 2024

- Flagged 40+ would-be defects as primary code reviewer, reached in just over a year, requesting changes on 25+ of 50+ PRs including senior-approved work, and mentored teammates on defect resolution.
- Restored SQL queries degraded 2 to 3x to near-baseline response times with no downtime, by adding an index and gating a stored procedure's longer path behind a setting.
- Removed a data-loss risk by rewriting legacy stored procedures, one of them 4,000 lines, to use differential updates.
- Designed and owned a localization integration layer in JavaScript and C# that launched with 5+ languages, with providers switchable by configuration, per-element opt-out and coverage through the API and database layers.

Software Engineer Intern - Zenoti Feb 2022 – Aug 2022

- Unlocked a major account by extending a hierarchical permission model as a 2-week proof of concept.

PROJECTS

HackerRank Orchestrate - Ranked 224 of 3,062 (top 8%) in a 24-hour AI agent hackathon, built with Claude Code.

EDUCATION

MCA, Computer Applications - Vellore Institute of Technology (2020 – 2022) · GPA 8.74/10

B.Sc., Information Technology - St. Xavier's College, Ranchi (2017 – 2020) · GPA 8.26/10

CERTIFICATIONS

MCP: Advanced Topics (Anthropic), Claude Code in Action (Anthropic), Meta Back-End Developer (Meta)
